

Locking Wheel Spacer

Description:

The OCM Locking Wheel Spacer is a polymer composite bar support used to maintain the position of rebar during placement and is typically used in lateral positioning applications. It can be used to position vertical rebar from the side forms.

Features:

- Very Strong and Durable Polymer Composite Rebar Support
- Positive Tight Locking on to Rebar
- Color is Matched to Concrete Color
- Unique Patent Pending Locking Latch

Additional Notes: OCM Wheel Spacers meet CRSI Requirements
