

P-201

A hydrophilic, single component, elastic sealant that has putty-like consistency. P-201 is the most versatile product in the Adeka product line. Commonly used in piping penetrations, sheet pile, precast segment, crack repair, CIPP pipe, cold/construction joints etc. P-201 is recommended for use with other Adeka strip products when the work surface is rough, spalled, cracked, or at connections. Once cured P-201 shows the same performance as pre-formed Adeka products. Packaged (24) - 11 once cartridges per case, (6) - 11 once cartridges per box, and a 3.17 gallon pail.
