

ACLMP

The A Clamp is a holding device fabricated from high strength steel that is used in a single waler snap tie forming application to ensure proper load distribution when installed correctly. A Clamps work with Short End Snap Ties, single horizontal walers, or single vertical strongbacks. The A Clamp Body is set against the waler or stiffback and the clamp rotates across the tie just inside the tie head drawing up all of the components until snug.

Part Number	ACLMP
